

ENVIRONMENTAL SCIENCE (ENVIR)

ENVIR 010 Environmental Science 4 Units

In this interdisciplinary course students examine the foundations for a sustainable future and interaction between human civilization and the environment. Students explore the major issues facing our planet such as population growth, resource exploitation, pollution, and dwindling biodiversity. They analyze environmental policies and their effectiveness. Field trips are required. The course is designed for non-science majors to meet AA/AS general education laboratory science requirements in either biological or physical science.

Lecture Hours: 3 Lab Hours: 3 Repeatable: No Grading: L
